Excellence in Construction Award, 2007

PENNDOT I-83 Reconstruction and Realignment of "Dead Man's Curve" York, PA

This project involved the realignment of I-83 to greatly reduce the radius of the existing curves, and also included a bituminous overlay, a bridge rehabilitation, a sound barrier wall and the construction of three bridges on Business 83. We also constructed a new diamond interchange, a second travel lane in both directions and left turn lanes at Leader Heights Road. Traffic was maintained throughout the duration. The owner said, "Kinsley Construction is to be commended on the professional manner in which you conducted business throughout the entire three and a half years of construction." This project received an Award of Excellence.
